

## Packet Digital Named to Inc. 500 Fastest Growing Companies

*674% Growth Over Three Years Puts Company in Elite Category*

**August 27, 2008, Fargo, ND** – Packet Digital, an emerging world leader in advanced power management solutions for portable electronic devices and embedded systems, has been ranked number 468 on Inc. Magazine’s prestigious list of the fastest growing companies in the United States. Based on its phenomenal growth of 674% over three years, Packet Digital earned a place in the magazine’s 27<sup>th</sup> Annual Inc. 500 list. Within Inc.’s energy sector Packet Digital ranked as the 21<sup>st</sup> fastest growing company.

“This is an incredible way to celebrate the five-year anniversary of the founding of Packet Digital,” said Packet Digital Chief Executive Officer Joel Jorgenson. “To be recognized in this way, this soon in our history, is not only a great honor for our talented and dedicated team, but validation that we have chosen the right path to solving one of the great technical challenges of portable electronic devices.”

Jorgenson said extending battery life and improving consumer satisfaction through advanced power management will help solve a major need in smaller, sleeker devices that demand ever-increasing functionality.

Jorgenson also noted that it was rare for a company in this region to earn this recognition by Inc., noting that Packet Digital was the only business between Minneapolis and the state of Washington chosen in the upper northwest. He also credited the nurturing environment created for technology advancement in Packet Digital’s home state for helping the company through its early growing stages.

“I’m very proud to see that Packet Digital has been honored by Inc. Magazine as one of the fastest growing small businesses in the nation,” said Senator Byron Dorgan (D-N.D.). “Inc. Magazine is one of the premier business publications in the U.S. I believe Packet Digital has enormous potential with its cutting-edge battery life extension technology. Packet Digital’s recent achievement is one of the many success stories coming out of the Red River Valley Research Corridor.”

“This is a well deserved honor for Packet Digital, an outstanding technology based business,” said North Dakota Gov. John Hoeven. “Back in 2001, we targeted companies like Packet Digital for growth, and we worked hard to create the kind of business climate where they could thrive.”

Packet Digital’s inclusion on the Inc. 500 list puts it in an elite group that over the years has included Microsoft, Timberland, Intuit, Cold Stone Creamery, Qualcomm, Under Armour, and Oracle. Many of today’s most successful companies received their first public recognition when they appeared on the Inc. list.
